Dear Mr. Surgeon:

As you requested, we checked WNOP's monitor points and have found them to be unaffected by your recent WKFS tower modification (FCC BXPB-20050304ABZ). We also checked field ratios in the immediate vicinity of your tower and could not find any evidence of significant of reradiation on 740 kilohertz.

I am the technical consultant for WNOP and recently completed a full proof of performance of WNOP's antenna system. I am, therefore, very familiar with WNOP's antenna operation. Your station's FM antenna support tower was an existing tower when that most recent proof was completed and no interfering effects were evident at that time either.

I have talked with Bill Levitt, WNOP's General Manager, and we agree that the modifications made by WKFS have not interfered with WNOP's directional antenna operation.

Sincerely,

James P. Gray
